

<Brandon Pastuszek />

Sr. Product Engineer / Lead Software Engineer

📞 570-898-4588 ✉️ brandonpastuszek@gmail.com 🌐 brandonpastuszek.github.io

EDUCATION

B.S. Software Engineering

Minors in Computer Science and Behavioral Economics

Rochester Institute of Technology
Rochester, NY

SKILLS

AI

Claude, Cursor, ChatGPT, Codex, GitHub Copilot, Prompt Engineering, Loop Engineering

Web

TypeScript, JavaScript, Python, Angular, AngularJS, Node, Express, Restify, SCSS, LESS, SASS, CSS, NPM, Grunt, Gulp, Webpack

Native Mobile

iOS: Objective-C, Swift, tvOS
Android: Java, Kotlin
Flutter

Services

Java, Kotlin, Spring Boot, CXF, Lombok, Aspect-Oriented Programming

Database

SQL-based (MS SQL, MySQL, MariaDB), MongoDB, DynamoDB, Redis

Infrastructure

AWS, Google Cloud Platform (GCP), Microsoft Azure, Kafka, Kinesis

Overall

Docker, GitHub, GitLab, Subversion, Perforce, Harness (CI/CD), Jenkins, System Design, Software Architecture, API Design, CI/CD, Agile, Splunk

Leadership

Technical Leadership, Mentoring, Cross-functional Collaboration, Product Engineering

THINGS THAT SET ME APART

Product-Oriented

I'm interested in the end-to-end experience. I partner with Product, Design, Operations, and Engineering to build better solutions.

Real Engineer

Any technology can be learned. I have demonstrated experience encountering something new and quickly becoming the "go-to" person on it.

Culture-Driven

Culture is everything. It is the difference between a team genuinely wanting to go the extra mile and being driven to achieve, versus doing the bare minimum to collect a paycheck.

RECOGNITION

“Goes above and beyond his assigned tasks”

“Proactive approach”

“Attention to detail and commitment”

“Always available”

More at brandonpastuszek.github.io

Full-stack software engineering leader with 15+ years building high-traffic mobile, web, and service experiences. Deep iOS expertise in Objective-C and Swift, Android development in Java and Kotlin, modern web engineering, and production service architecture in Java and Kotlin—delivering guest and Cast experiences across the Disney Parks technology ecosystem.

EXPERIENCE

Self-Employed / Freelance

Orlando, FL

Senior Product Engineer

May 2026–Present

- Own the full product lifecycle, playing roles as product, project management, design, software developer, and delivery. I am involved in ideation, requirements, full-stack implementation, release, and production monitoring and feedback. This dramatically cuts down on overhead, handoff, and overall cost.
- Using Codex and Claude to more rapidly deliver and test solutions.
- Mix of projects but have presented to a variety of organization leaders.

Disney Experiences

Orlando, FL

Lead Software Engineer

Jun 2022–May 2026

Senior Software Engineer

May 2018–Jun 2022

Lightning Lane & Guest Service

- Integrated our Cast-facing Guest Service booking flow directly with Hong Kong Disneyland's Point of Sale system. Cast could pick up the handheld device and directly charge what they selected in our Lightning Lane booking application. This led to more sales occurring at a faster rate at the Park and Resorts. Worked web, backend, and hardware device integration using Web Serial API.
- Ported the main portion of our domestic Cast-facing Guest Service Suite over to Hong Kong Disneyland. This allows the team to quickly access, triage, and update Guest info and entitlements all in one UI, reducing time required to assist a Guest and thus helping more Guests in a given timeframe. Also refactored to use latest Angular, TypeScript, and Kotlin trends. Regularly worked with the team in Hong Kong to ensure data setup was correct and support all testing scenarios. Served as data, testing and systems integration expert. Worked web and backend.
- Developed functionality to have Lightning Lane entitlements included with a ticket purchase be configurable. This allowed us to have special offers that varied the number of Lightning Lanes you were allowed to hold, allowing us to drive additional ticket sales. Worked web and backend.

Virtual Queue

- Developed Virtual Queue as a day-one developer. Similar to how standby works at a restaurant, this works similar for attractions and other experiences. Integrated into the Walt Disney World and Disneyland Resort apps. Worked mobile, web, backend. The time saved in line per year is measured in millennia (seriously, like thousands upon thousands of years). We saw a notable increase in Food and Beverage sales around areas that used Virtual Queue.
- Migrated Guest-facing Virtual Queue functionality from native Swift and Kotlin implementations to Flutter. Served as liason between Disney and Google. Also, ported initial version of Virtual Queue to web using Flutter. This allowed us to have a "write once, run everywhere" codebase. Worked mobile (native and Flutter), web, backend.

Resort & Passholder Experiences

- Developed ability to limit Guests from using Direct-to-Room functionality. This prevented fraud from some Guests using Vacation Club points for other Guests. When limited, the system would notify the Guest they should check-in at the front desk. Worked web and backend.
- Developed Annual Passholder Gift Card Promotion Fulfillment. As a special offer, purchasing or renewing an annual pass would also give the Guest a certain gift card amount. This encouraged more annual pass renewals and additional spending at Parks, dining, merchandise locations, and Resorts. Worked web and backend.

Guest Messaging

- Directed migration planning from Braze to Adobe Journey Optimizer through API evaluation, prototyping, and implementation guidance. The migration allowed us to switch from purely sending push notifications and tracking click rate to also adding them to an in-app notification center and tracking a Guest's journey after tapping the notification. Served as architecture and integration.

Platform & Engineering Leadership

- Created a suite of production monitoring Splunk alerts with instructions for live-site team on how to correct. These were also used Enterprise-wide to gauge the health of dependent systems. We always found production issues before the first human report came in. The dev team rarely needed to join production calls because the alerts self-diagnosed and provided dependent teams with instructions. The alerts were also available and running 24/7.
- Integrated Claude, Cursor, GitHub Copilot into engineering workflows for architecture, debugging, modernization, and delivery acceleration.
- Throughout the efforts above I was leading teams sized at just myself to 15 people.
- Regularly presented to executives.

Disney | ABC Television Group

Burbank, CA

Senior Software Engineer

Oct 2017–May 2018

- Developed and led significant ABC app redesign. This made the UI cleaner and increased performance. Developed as a white label app that was later used to onboard FX and National Geographic quickly as part of the Fox aquisition. Worked iOS and tvOS.
- Moved from building app store apps from local machine to Jenkins. Worked on automated GitLab to Jenkins to uploading to TestFlight pipeline.
- Served as technical lead of 9.
- Regularly presented to executives.

Disney Parks & Resorts Digital

Orlando, FL

Senior Software Engineer

May 2015–Oct 2017

Software Engineer

Dec 2012–May 2015

Web Developer

May 2011–Dec 2012

- Created Cast-facing iOS tools for booking FastPasses and using mobile devices to augment physical readers at FastPass locations. Worked on mobile, backend.
- Led development of FastPass+ Simplification, a major creative and functional update that made it easier for Guests to select experiences at specific times. Worked on mobile, web, backend. Regularly presented to executives.
- Led Great Food Fast, Disney's first digital food pre-order service. This allowed Guests to order on their mobile device and their order would be delivered to their table. Worked mobile, web, backend.
- Brought FastPass selection experiences to mobile and web for Shanghai Disney Resort, Disneyland Resort, and Walt Disney World. This allowed Guests to book attraction reservations on their phones and web without running around the Park to do so. This allowed Guests to sleep in morning-of a Park day, plan in advance, and reduce stress of trying to get on their must-do attractions. Worked on mobile, web, backend. Regularly presented to executives.
- Developed itinerary and Finder. This allowed Guests to see and modify their plans, as well as discover what is out there to experience and book. Worked web and backend.
- Regularly presented to executives.

Trifecta Technologies

Allentown, PA

Software Engineer

Nov 2010–May 2011

- Continued my internship work remotely while finishing up my college degree at Rochester Institute of Technology. Developed and maintained Guest, Cast, and in-attraction MyMagic+ native mobile, web, backend prototypes. These were part of a \$1b+ project from Bob Iger to enhance Parks and Resorts through technology.

Walt Disney World Parks & Resorts

Orlando, FL

Information Technology Professional Intern

May 2010–Nov 2010

- Developed and maintained Guest, Cast, and in-attraction MyMagic+ native mobile, web, backend prototypes. These were part of a \$1b+ project from Bob Iger to enhance Parks and Resorts through technology. Regularly presented to executive teams up to 4 times a week.
