

Brandon Pastuszek

SOFTWARE ENGINEERING LEADER — MOBILE, WEB, BACKEND & PLATFORM

PRIMARY COURSE: TEAM LEADERSHIP · ARCHITECTURE · DELIVERY · RELIABILITY · GUEST EXPERIENCE

570-898-4588 brandonpastuszek@gmail.com brandonpastuszek.github.io

ALL HANDS ON FLUTTER · GUEST MAGIC ON DECK · READY TO SHIP

NAVIGATOR'S TRAINING

RIT

B.S. Software Engineering

Minors in Computer Science and Behavioral Economics

Rochester Institute of Technology
Rochester, NY

TECHNICAL COMPASS

AI-Assisted Engineering

Claude, Cursor, ChatGPT, Codex, GitHub Copilot; AI/GenAI engineering workflows, prompt engineering, loop engineering

Web Deck

JavaScript, TypeScript, Node.js, Angular, Express, Restify, SCSS, LESS, SASS, CSS, NPM, Grunt, Gulp, Webpack

Mobile — Flutter at the Helm

Flutter & Dart; Android (Java, Kotlin); iOS/tvOS (Objective-C, Swift); cross-platform architecture; mobile performance optimization

Engine Room

Java, Kotlin; Spring Boot, CXF, Lombok, REST APIs, Object-Oriented Analysis and Design, Aspect-Oriented Programming

Data & Persistence

SQL Server, MySQL, MariaDB, MongoDB, DynamoDB, Redis; data contracts and systems integration

Cloud & Distributed Systems

AWS, Google Cloud Platform (GCP), Microsoft Azure, Kafka, Kinesis

Reliability & Delivery

Splunk observability, production support, incident response, application reliability, Docker, Harness, Jenkins, GitHub, GitLab, CI/CD, Agile, system and software architecture, API design

Crew Leadership

Technical leadership, mentoring, cross-functional and distributed-team collaboration, stakeholder communication, product engineering

WHAT I BRING ABOARD

Hands-On Engineering Leader

I lead teams while staying close to architecture, code reviews, troubleshooting, and delivery across mobile, web, backend services, data, and cloud platforms.

Business & Technology Partner

I translate complex tradeoffs into clear plans for Product, Design, QA, Operations, engineers, business partners, and executives.

Operational Ownership

I balance new Guest capabilities with application health, monitoring, production support, performance, and continual improvement.

CREW REVIEWS

“Goes above and beyond his assigned tasks

“Proactive approach

“Attention to detail and commitment

“Always available

CAPTAIN'S LOG

Hands-on engineering leader and senior mobile/platform engineer with 15+ years delivering high-traffic Disney Guest and Cast experiences across mobile, web, backend services, data, and cloud. Led teams of up to 15—including serving as technical lead for a nine-person team—and partnered with Product, Design, QA, Operations, distributed engineering teams, Google, and executives to turn business priorities into reliable software. Deep experience in Flutter, native Android and iOS, Java/Kotlin services, JavaScript/TypeScript/Angular/Node, REST APIs, SQL and NoSQL databases, AWS/GCP/Azure, CI/CD, Splunk observability, and production support. Balanced major Guest-facing capabilities with application reliability, performance, systems integration, and operational readiness while remaining hands-on in architecture and troubleshooting. Brings direct Disney context and practical AI/GenAI adoption to lead Mobile Navigator and its supporting services.

VOYAGES & PORTS OF CALL

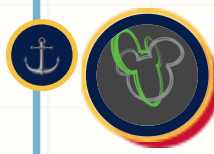

Self-Employed / Freelance

Orlando, FL

Senior Product Engineer

May 2026–Present

- Own the full product lifecycle—from ideation and requirements through design, full-stack implementation, release, monitoring, and customer feedback—reducing handoffs, overhead, and cost.
- Use Codex and Claude to accelerate development, testing, and iteration while keeping engineering judgment in the loop.
- Build across mobile, web, and backend as projects require, and present solutions to organizational leaders.

Disney Experiences

Orlando, FL

Lead Software Engineer

Jun 2022–May 2026

Senior Software Engineer

May 2018–Jun 2022

Lightning Lane & Guest Service

- Integrated a Cast-facing Guest Service booking flow directly with Hong Kong Disneyland's point-of-sale system, enabling handheld checkout inside the Lightning Lane application and helping Cast complete more sales, faster. Built the web experience with JavaScript/TypeScript/Angular, Java/Kotlin backend services, and a Web Serial hardware integration.
- Ported the domestic Guest Service Suite to Hong Kong Disneyland, giving Cast one UI to access, triage, and update Guest data and entitlements. Modernized the JavaScript/TypeScript/Angular frontend and Java/Kotlin backend, and served as the data, testing, and systems-integration expert with the Hong Kong team.
- Made ticket-bundled Lightning Lane entitlements configurable, enabling new promotional offers and supporting incremental ticket sales. Delivered across JavaScript/TypeScript/Angular web and Java/Kotlin backend services.

Virtual Queue

- Helped develop Virtual Queue from day one—the attraction equivalent of a restaurant waitlist—and integrate it into the Walt Disney World and Disneyland apps. Delivered native Android (Java/Kotlin), native iOS (Objective-C/Swift), JavaScript/TypeScript/Node/Angular web, and Java/Kotlin backend work. The product saves millennia of annual wait time and increases nearby food-and-beverage sales.
- Migrated Guest-facing Virtual Queue from native Android (Kotlin) and iOS (Swift) implementations to Flutter while serving as liaison between Disney and Google. Also brought the initial Flutter implementation to the web, creating a shared “write once, run everywhere” codebase while retaining native and Java/Kotlin backend integrations.

Resort & Passholder Experiences

- Built Direct-to-Room eligibility controls that reduced Vacation Club fraud and guided affected Guests to front-desk check-in. Delivered the JavaScript/TypeScript/Node/Angular web flow and Java/Kotlin backend services.
- Built Annual Passholder Gift Card Promotion Fulfillment, supporting renewal incentives and additional spending across parks, dining, merchandise, and resorts. Delivered across JavaScript/TypeScript/Node/Angular web and Java/Kotlin backend services.

Guest Messaging

- Directed migration planning from Braze to Adobe Journey Optimizer through API evaluation, prototyping, and implementation guidance. The migration allowed us to switch from purely sending push notifications and tracking click-through rates to also adding notifications to an in-app notification center and tracking a Guest's journey after tapping a notification. Served as the architecture and integration lead.

Platform Reliability & Engineering Leadership

- Led engineering efforts and teams ranging from individual ownership to 15 people, coordinating mobile, web, backend, testing, and cross-functional partners while maintaining hands-on technical leadership.
- Built a 24/7 suite of Splunk production-monitoring alerts that detected issues before the first human report, self-diagnosed failures, and gave live-site and dependent teams clear remediation steps. The enterprise-wide alerts improved operational visibility and reduced the need for developers to join incident calls.
- Introduced Claude, Cursor, and GitHub Copilot into engineering workflows for architecture, code modernization, debugging, delivery acceleration, and production support.
- Provided technical direction through architecture decisions, code reviews, troubleshooting, and mentoring; regularly communicated plans, risks, and solutions to executives and cross-functional partners.

Disney | ABC Television Group

Burbank, CA

Senior Software Engineer

Oct 2017–May 2018

- Served as technical lead for a nine-person team while leading a major native iOS/tvOS redesign using Objective-C and Swift, improving UI clarity and performance. Built it as a white-label platform later used to onboard FX and National Geographic quickly following the Fox acquisition.
- Moved App Store builds from local machines to Jenkins. Worked on an automated pipeline from GitLab to Jenkins to TestFlight.
- Regularly presented to executives.

Disney Parks & Resorts Digital

Orlando, FL

Senior Software Engineer

May 2015–Oct 2017

Software Engineer

Dec 2012–May 2015

Web Developer

May 2011–Dec 2012

- Created Cast-facing native Android (Java/Kotlin) and iOS (Objective-C/Swift) tools for booking FastPasses and augmenting physical readers, backed by Java services.
- Led FastPass+ Simplification, a major creative and functional update that made time-based experience selection easier. Delivered native Android (Java/Kotlin), native iOS (Objective-C/Swift), JavaScript/TypeScript/Node/Angular web, and Java backend work; regularly presented to executives.
- Led Great Food Fast, Disney's first digital food pre-order service, letting Guests order from their phones and receive food at their tables. Served the full stack: native Android (Java/Kotlin), native iOS (Objective-C/Swift), JavaScript/TypeScript/Node/Angular web, and Java backend.
- Brought FastPass selection to native Android (Java/Kotlin), native iOS (Objective-C/Swift), and JavaScript/TypeScript/Node/Angular web experiences for Shanghai Disney Resort, Disneyland Resort, and Walt Disney World, backed by Java services. Guests could reserve from their phones or the web, plan ahead, sleep in, and spend less time running around the park.
- Developed the Itinerary and Finder JavaScript/TypeScript/Node/Angular web experiences with Java backend services, helping Guests discover, view, and modify plans.
- Regularly presented to executives.

Trifecta Technologies

Allentown, PA

Software Engineer

Nov 2010–May 2011

- Continued internship work remotely while completing my RIT degree, developing Guest-, Cast-, and attraction-facing MyMagic+ prototypes across native Android (Java), native iOS (Objective-C), JavaScript/Node web, and Java backend services for a \$1B+ parks technology initiative.

Walt Disney World Parks & Resorts

Orlando, FL

Information Technology Professional Intern

May 2010–Nov 2010

- Developed Guest-, Cast-, and attraction-facing MyMagic+ prototypes across native Android (Java), native iOS (Objective-C), JavaScript/Node web, and Java backend services for a \$1B+ parks technology initiative. Presented to executive teams as often as four times per week.

NEXT PORT OF CALL: DISNEY CRUISE LINE ENGINEERING LEADERSHIP
